This two-day conference, with options for on-site or remote videoconference participation, offers an exclusive forum for neurotechnology executives and entrepreneurs to interact with investors, technologists, and potential partners who are actively working to grow this new and exciting industry. The schedule of presentations and panel discussions features a host of experts with a wealth of information on the neurotechnology industry and the investment community.

Sessions will cover a range of technologies and market segments in the neuro space, including neuromodulation, neuroprosthetics, neurosensing, and neurorehabilitation. The first day of the conference features sessions on the market for neuromodulation devices, including an in-depth overview of the industry by Neurotech Reports editor James Cavuoto. Executives from several startup and early stage neurotechnology companies will take part in an Entrepreneur Panel. Keynote speaker this year is Mudit Jain, founder and general partner at Treo Ventures and also the NuXcel accelerator. He is also the founder of several neurotech firms, including ShirTronics. The conference features sessions devoted to wearable neuromodulation, brain data analysis, and new therapies for treating psychiatric disorders.
